

# How-To: Install HID Relay Harness

Relay Harness Bought From [www.BuyHIDs.com](http://www.BuyHIDs.com) - #1 Plug-N-Play Xenon HID Kits

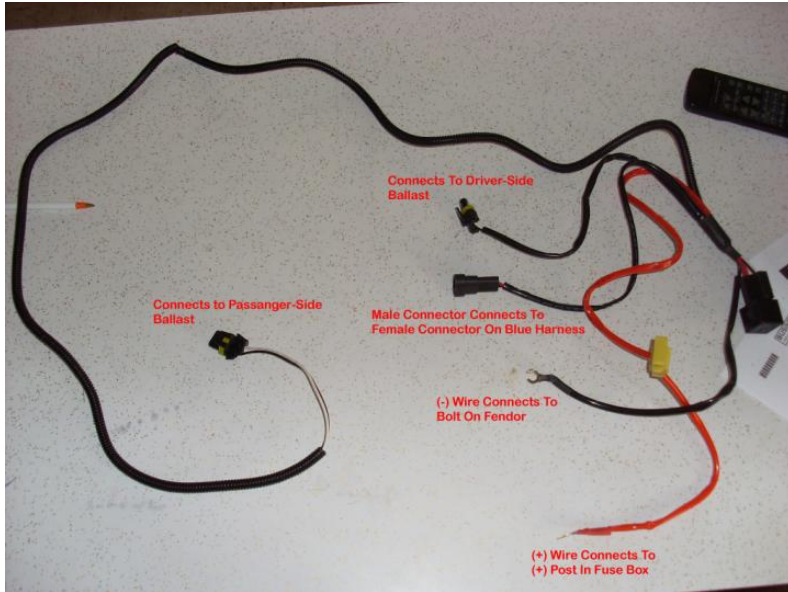

## Tools Required:

-----  
10mm Socket  
Socket Wrench  
3/4 Extension

**REMOVE YOUR DAY TIME RUNNING LIGHT FUSE For Any HID Install !! - Failure to do so may void warrenty!**

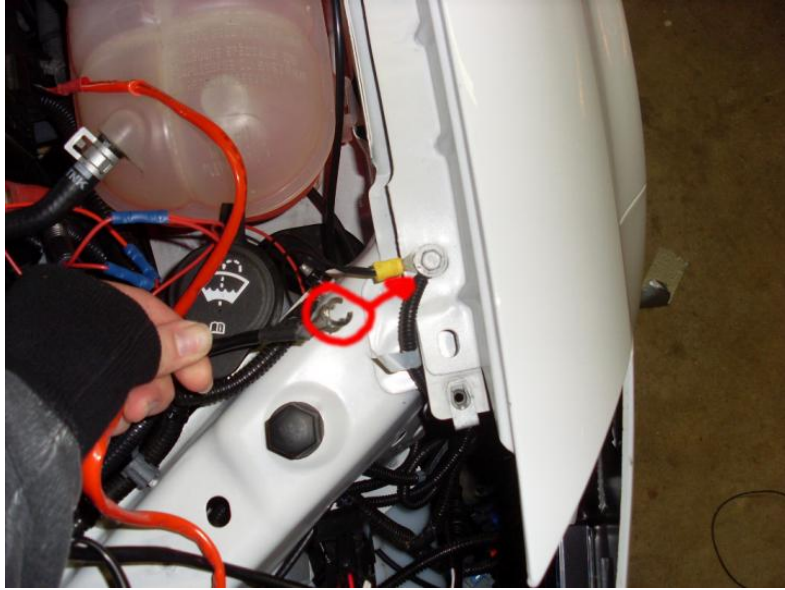

Here is a diagram of the Relay harness. It looks complex but it's very simple.

**Step 1:** Now take your relay Harness and wire the (+) Wire to the (+) post in the fuse box. The post just twists off. Install wire and tighten post back down.

**Step 8:** Take the (-) wire and connect to the bolt on the fender. 10mm socket works.

**Step 9:** Now run the wire for the passanger side (longest wire from relay harness) with the wires that run across the front beam of the car. Below is a picture and the red line is the "wire".

Your relay harness is now installed.
